

Agrochemicals Consumption. Hard Facts

Source: FAO (Accessed on 18th May 2024)

Unit: Tons (Active Ingredients)

- **India's (\$ 546 Bn) agricultural output is double** than that of the EU (\$ 278 Bn) and USA (\$ 224 Bn). Yet, India uses much less agrochemicals than the EU & USA.
- The EU funded activist NGOs are promoting a false narrative in India hiding these hard facts.
- The agrochemicals use per hectare in India is **0.37 kg** as against **3.2 kg** in EU and **2.85 kg** in USA.
- Indian farmers are the most efficient and judicious users of agrochemicals.
- There is a PIL filed recently before the Supreme Court alleging rampant use of agrochemicals by farmers of India.

Their Lordships, may be pleased to consider the solid facts. May truth triumph over non-truth
